Little Science Minds after-school enrichment program is designed to ignite your child's curiosity about how things work in the world we live in. Each session will provide engaging, interactive and hands-on exploration of specific science topics. From air, water, weather, animals and more. Your budding scientist will learn to use their senses, and start to think as scientists do by using the scientific method:

1. Observe
2. Ask questions
3. Make a hypothesis (I think...)
4. Experiment
5. Draw conclusions (I learned that...)
6. Record results

Your preschooler will enjoy captivating demonstrations, perform simple science experiments and discover how science can help him/her to better understand the world around us.
